

FAMINE PRICES RULE IN CITY OF MOSCOW

(Correspondence Associated Press)

OMSK, Siberia, April 11 (via Vladivostok), May 2.—Horse meat sold at 30 rubles a pound, dog meat at 12 rubles, rye flour at 22 rubles and potatoes at 7 rubles a pound in Moscow last February, according to an American, Mr. Dillon, who has just arrived here from that city. Mr. Dillon, who represented a large farm machinery firm, left Moscow February 9 and arrived at Omsk after many difficulties on April 2.

A box of matches, if obtainable at all, cost 15 rubles in Moscow, he said. A ruble before the war was normally worth 15 cents. Its value now is problematical owing to the vast amount of paper money which has been printed by the Bolshevik government.

Bolshevik workmen in Moscow who can find employment receive 650 to 1500 rubles a month and, Mr. Dillon said, are barely able to live through receiving special concessions in food stuff prices in Bolshevik stores. Non-Bolsheviks, who cannot buy in such stores at any price are in desperate straits. There have been many cases of starvation and

many suicides. There is much sickness, resulting from mal-nutrition and unsanitary conditions. Glanders is common and results from eating infected horse meat.

The city was full of unemployed workmen when Mr. Dillon left. There were 5,000 idle metal workers and a great number of idle textile workers. People were burning furniture to heat their rooms because of a shortage of firewood.

Moscow, according to Mr. Dillon, was half deserted. All signboards of formerly prosperous business houses had been removed after the places had been "nationalized." Drunkenness was prohibited under penalty of death.

There was an endless Bolshevik propaganda and proselytizing was carried on feverishly among returning Russian war prisoners from Germany. Strikes in other countries were hailed with delight and a world-wide revolution was represented as being in

progress.

Insurrections among workmen were on the increase. The peasants were desperate over the merciless requisitioning of their property. Forty per cent of the winter crop remained unplanted for lack of horses and seed. The annual partition of land among the peasants did not occur and little preparation was made for spring planting. Railroads were without fuel except such supplies as were brought from day to day green from the forests. All reserve supplies had been exhausted.

Church services were being suppressed. Factories had closed owing to lack of fuel. This was true even of munitions and arms factories and there was a noticeable shortage of rifles and ammunition. Discipline in the army was maintained by terroristic methods but even so, mutinies constantly occurred and desertions were frequent.

In the opinion of the narrator, all that was necessary to cause the early collapse of Bolshevism was a vigorous offensive by the Siberian army

CABS SURVIVE THE AUTOMOBILE

(Correspondence Associated Press)

ROME, May 10.—The horse here has not vacated his position to make room for the automobile. There are still thousands of horse-drawn cabs operating in Rome while there is not a single taxicab.

Two reasons are given for this equine superiority. First, there are three thousand cab drivers in Rome, according to the municipal statistics. These exercise a considerable influence in the municipal elections of Rome and as a consequence no motor vehicle concessions are granted. The politicians know that in order to retain these three thousand votes they must be faithful to the horse and an enemy to the "filver."

Besides the supply of gasoline in Italy is not large and to insure enough for the military needs, it was found absolutely necessary to discourage as much private motor vehicle traffic as possible.

SUPREME COURT ON FLOTATION

BUTTE, Mont., June 11.—Millions are involved and many mining companies in the country are affected by a decision of the United States supreme court handed down at Washington, Monday. A body blow was delivered to all producing companies whose use of the minerals separation process involved them in the technicalities of the courts holding. More than two and a half millions of dollars have been expended in the litigation which was ended by the supreme court decree reversing the decision of the circuit court of appeals at San Francisco which held that the minerals separation company's patents covered the so-called flotation process when limited to the use of one-half of one per cent, or less, of oil. Minerals separation had held that their patents covered any fraction of one per cent. The court upholds that contention.

In December, 1916, the United States supreme court decided in favor of Minerals Separation, Ltd., against Hyde, upholding the patent of the Minerals Separation process, which was patented in 1905 after the discovery of the process for producing a mineral bearing froth as the result of the use of oil and mechanical agitation. In April, 1917, the United States district court at Butte decided that the case against the Butte and Superior was identical with that against Hyde.

In August, 1917, the same court handed down a decision that the Butte and Superior Mining company, by use of more oil in flotation than was used in the Minerals Separation patent was merely an attempt to avoid the patent, and the mining company was ordered to furnish a bond of \$2,500,000 and to deposit all of its earnings above actual operating expenses, with the court, until an appeal had finally been adjudicated.

In May, 1918, the United States circuit court of appeals at San Francisco decided favorably on an appeal from the decision of the district court at Butte, and the following month the United States court at Helena revoked the injunction against the mining company ordered by the higher court, thus relieving the Butte and Superior.

The American Mining Congress has filed with the federal trade commission a complete brief in support of its charge that the Minerals Separation company, by its business method, and the onerous terms of its license contracts, is using unfair methods of

BOXERS ARE IN THICK OF GRIND

After paying the training camps of Joe Welch and Sailor Lloyd a flying visit this afternoon, Cal Dittmar, the "Tex Rickard" of Tonopah, reports that the boxers are rounding into great shape for their 25-round journey next Tuesday.

Welch covered six miles over the hills in the morning, and reported at the Firemen's gymnasium in the afternoon complaining of a slight stiffness in his legs. He went through his workout as if he was training for a championship mill. After skipping the rope and shadow boxing for a few rounds he boxed a couple of sessions with Dummy Guthrie, the "fighting cook." Joe says that all he needs to put him on edge is road work and stiff boxing. As he takes good care of himself in between fights he very naturally has a snap attaining the form necessary to carry him through a hard grueling long distance mill.

Lloyd is Snappy and Full of Pep

At the Casino, Sailor Lloyd entertained an interested party of fans. After being out on the road for the better part of two hours in the morning, the sailor reported for his afternoon work brimful of pep. He tore into his work with a snap and abandon that is an assurance that he will be in the same good condition that characterized his first appearance here when he carried off the referee's verdict at the end of the twentieth round.

Matchmaker Dittmar is planning a special workout for the entertainment of the local business and professional men who find it inconvenient to leave their affairs during the mid-day. It is to be a gala performance at which both the main events will don the gloves so that the followers of the sport can judge the form of both contestants.

competition an dasks the right to intervene in behalf of the mining industry of the west. This brief is now under consideration by the federal trade commission.

LONDON SPENDS FOR INSTALLING LIGHT PLANT

(Correspondence Associated Press)

LONDON, May 14.—England is preparing to provide herself with cheap and abundant electricity for heating, lighting and manufacturing purposes at an initial cost of approximately \$100,000,000. The bill to accomplish that result has been introduced in parliament by the home secretary and with the endorsement of the government, as well as of people of all classes, it is expected to become a law in the very near future.

The plan for placing the country on an electrical basis provides for its division into districts, each district to be in charge of a commission. This body, whose members are to be appointed at the pleasure of the king, will be empowered to acquire generating plants and transmission lines already built and to build such plants and lines as it may deem necessary. The commissioners are to conduct experiments for the purpose of improving methods of supply for which purpose they will be empowered to call to their assistance an advisory board of un-questioned experts.

It is not the purpose of the government to build up the electrical apparatus in the country but private corporations entering the field must obtain the consent of the government and abide by its regulations.

Water power will be extensively used in generating electricity to reduce the cost and to stimulate its use for manufacturing and domestic purposes.

It is also said that within a reasonable time every railroad in the country will be electrified.

Dr. Taylor is now in Tonopah. Offices at the Golden Eagle Hotel.—AdvJ316

RAISE STANDARD OF HOME LIVING

(Correspondence Associated Press)

ROME, May 10.—The Italian who has lived long in America is helping to Americanize Italy more potently than other factors could. He has introduced American ideas and American ways of doing things at every possible turn when it is practical and more efficient than the Italian.

The Italo-American has brought back from American an idea of better housing conditions and if he decides to settle again in Italy he builds a home patterned along lines American, with plenty of space all around it and with its division of rooms. Most Italian families of the farming sections are accustomed to live in one large room while large numbers live in thatched huts which dot the sides of mountains hidden among the trees and brush. Several families live in what would seem an ordinary American family's habitat.

NO SHIPS AVAILABLE TO CARRY SOLDIERS

(Correspondence Associated Press)

LONDON, May 24.—No shipping will be available until the coming autumn to carry British settlers to Canada, South Africa or Rhodesia, says the Overseas Settlement office. As autumn is an unsuitable season for landing settlers in Canada, no extensive provision for free passage to former soldiers under the new government proposals is likely to be made until January, says the government agency.

The Overseas Settlement office adds that there will be no shipping available to carry settlers from Great Britain to Australia or New Zealand until the beginning of 1920.
